

Cpronto® Studio

Cpronto® Studio is software for the industrial production of browser-based business applications on SAP systems.

Your Challenge

Your company needs individual web applications tightly integrated into existing SAP applications. SAP ERP is set as central business system. Your customers, the business departments expect process and application implementations in short time.

Cpronto® allows SAP consultants to design and generate web-to-SAP applications without any manual coding.

Scope

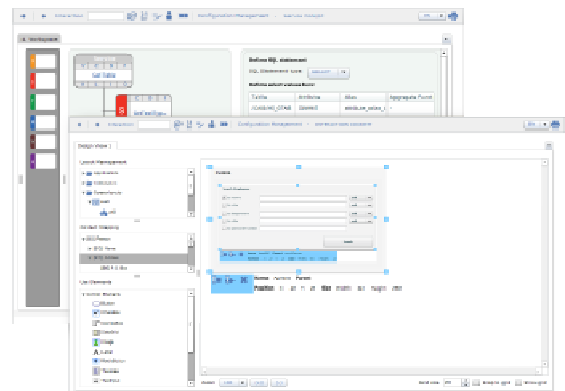

- Creation, change and configuration of browser-based business applications as extension to existing SAP applications
- SAP consultants design applications with browser-based cockpits
- Reuse and arbitrary integration into existing SAP applications
- Comprehensive governance and monitoring of application creation and application processing

Out-of-the-box functions

- Cockpits for easy drawing, setting-up and generating of browser-based applications
- Codeless integration of any existing standard and custom SAP application
- Installation on any SAP NetWeaver > 7.0 system; no further deployment required
- Optional process governance for each individually created web application

Your Benefit

- Fast IT response to business process changes with savings of > 70 %
- Application creation and changes just need consultants, no manual software coding by software developers
- Consolidation and harmonisation of web applications on SAP systems
- Application creation and changes remote through browser, no classical software development environment needed
- Extreme failure reduction for application creation by automatic code generation
