

Companio Servicehub

The **Companio Servicehub** is an ABAP component, that allows third party software to access SAP applications without any programming.

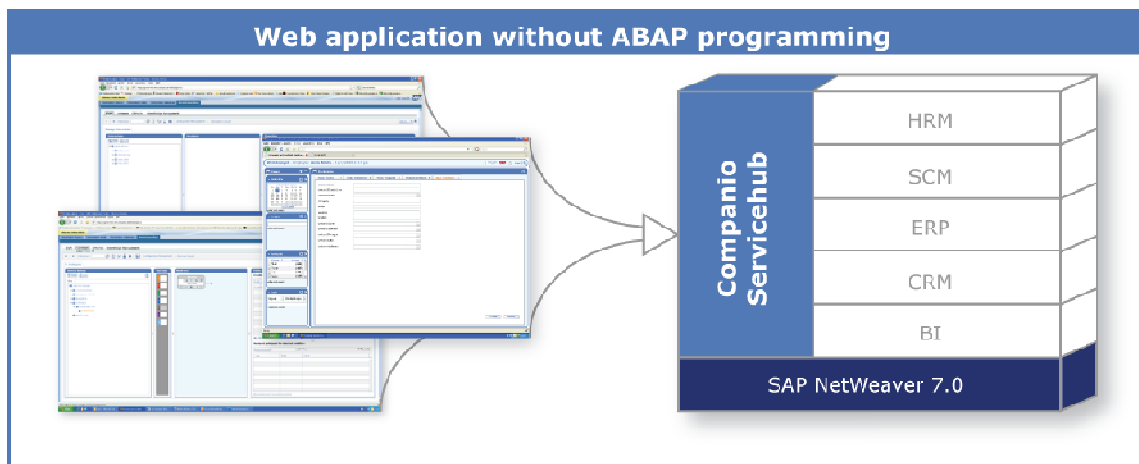

The challenge

Web applications and mobile applications inevitably need integration into existing SAP ERP, HCM, SCM, CRM applications. Manual ABAP interface programming is expensive and time-consuming.

By using the **Servicehub** SAP customers can extremely reduce their ABAP programming costs, modify their processes and applications during runtime and centrally manage access to their SAP applications.

Scope

- Deployment on any SAP application – ABAP stack from NetWeaver 7.0
- Using the **Servicehub** through any frontend-technology like Adobe, IBM, Microsoft, SAP
- Browser based, graphical configuration of ABAP-Services by SAP process experts
- Utilization of any existing SAP standard and custom code components
- Complete monitoring of every single access to SAP systems and of process changes and application changes

Companio **Servicehub** is the access into regulated and programming-free interfaces into your SAP key applications
